

Shared three-run material cohort: coverage and policy distributions

Every panel uses plant-material pairs with parseable policies in all three execution sets.

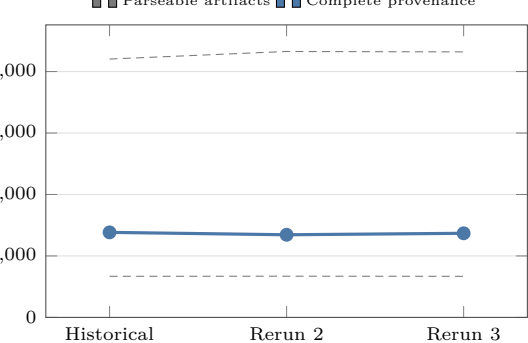

A. Shared-cohort artifacts and complete provenance

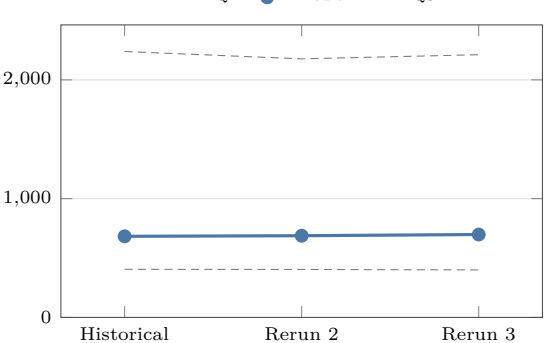

B. Reorder point distribution

C. Order quantity distribution

D. Safety-stock distribution

All panels use the shared three-run material cohort (n=365). Historical values are descriptive only: its exact deployed configuration was not preserved. Current reruns: 359 provenance-matched policy pairs; 38 exact numeric triples.
